EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

14. A method of scheduling and transmitting data packets to user entities, wherein channels are subject to interference from one another, comprising the steps of: receiving first scheduled data (pertaining to at least a dedicated channel); determining a possible power at a given instance as the maximum value of either the actual power at a previous instance or the possible power determined at a previous instance, and decreasing the maximum value by a predetermined value (d); determining a permitted power at a given instance as the maximum value of either the actual power of a previous instance added with the predetermined value (d) or the determined possible power; and, scheduling and transmitting packet data on at least a second channel, whereby the actual power is held within at least the permitted power.

The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Reasons for Allowance

Claims 1-7 have been cancelled.

Claims 8-14 are allowable.

Consider **claim 1**, the best prior art of record found during the examination of the present application, **Hwang et al. (US 2003/0108013)**, fails to specifically disclose, teach, or suggest a first unit receiving scheduled first data for transmission on at least a first channel; a power control unit for the first channel responsive to a respective closed loop power regulation signal under which at least the transmit power rate of change is limited to a predetermined value per time unit; a packet data scheduler scheduling second data packets for transmission on at least a second channel at an actual power level; and, a power amplifier amplifying and outputting the scheduled first and second data, wherein the outputted first and second channels are subject to interference from one another, and wherein the packet data scheduler is operative to: receive the first scheduled data; determine a possible power at a given instance as the maximum value of either the actual power at a previous instance or the possible power determined at a previous instance, decreasing the maximum value by a predetermined value (d); and, determine a permitted power at a given instance as the maximum value of either the actual power of a previous instance added with the predetermined value (d) or the determined possible power.

Claims 9-13 are allowable because it is dependent upon independent claim 1.

Consider **claim 14**, the best prior art of record found during the examination of the present application, **Hwang et al. (US 2003/0108013)**, fails to specifically disclose, teach, or suggest receiving first scheduled data (pertaining to at least a dedicated channel); determining a possible power at a given instance as the maximum value of either the actual power at a previous instance or the possible power determined at a previous instance, and decreasing the maximum value by a predetermined value (d); determining a permitted power at a given instance as the maximum value of either the actual power of a previous instance added with the predetermined value (d) or the determined possible power; and, scheduling and transmitting packet data on at least a second channel, whereby the actual power is held within at least the permitted power.
